PROFESSIONAL SUMMARY

Senior DevOps & Cloud Integration Engineer with over 5 years of experience specializing in Kubernetes, OpenShift, multi-cloud deployments (AWS, NCP, NCS).. Experienced in orchestrating enterprise platform suites—specifically **Nokia Cloud Operations Manager (NCOM)** and **Nokia Continuous Delivery (NCD)**—while configuring complex platform integrations (NetAct FM/PM, CaaS Onboarding, CBUR B&R) and self-hosted Git infrastructures. Proven track record across 15+ production geographies delivering scalable CI/CD automation, API management, and containerized microservices while maintaining 99.99% system availability

SKILLS SUMMARY

- **Core Platforms:** Nokia Cloud Operations Manager(NCOM), Nokia Continuous Delivery (NCD), Keycloak.
- **Cloud Platforms:** AWS, Nokia Cloud Platform (NCP), Nokia Container Services (NCS)
- **Container & Orchestration:** Docker, Podman, Kubernetes, OpenShift, Helm Charts
- **Databases:** PostgreSQL, MariaDB, NCD Redis Cluster
- **System Integrations:** NetAct / MantaRay , CaaS Onboarding, CBUR Backup & Restore
- **Automation & Tools:** Linux CLI, Bash Scripting, Git, Istio Service Mesh, Postman, Swagger/OpenAPI

WORK HISTORY

Infinite Computer Solutions 01/Dec/2025 - Present

Senior Software Engineer

NCOM Platform Installation & Infrastructure Provisioning

- Led the end-to-end installation of **NCOM** on Nokia Cloud Security (NCS) control nodes, managing the deployment from initial prerequisite setup to GUI validation.
- Processed core NCOM software packages extracted from the Software Supply Tool (SwST), extracting Helm charts and utilizing **ncom-images-push-utilities** to successfully load and push NCOM container images to target Docker registries (**bcmt-registry:5000**) via Podman.
- Configured and validated Fully Qualified Domain Names (FQDN) for public-facing NCOM access, ensuring proper DNS routing to edge nodes.
- Customized crucial deployment parameters within the **installtion.properties** file, meticulously configuring target Docker registries, Helm chart paths, API server proxies (**multi_tenant_server_url**), and instance prefixes.
- Executed background automated installations using **nohup ./ncom_operations.sh &**, tracking progression through installation logs and validating post-deployment health using **kubecttl get pods** and **helm3** history.

Security, Access Control, & Namespace Management

- Created dedicated NCOM namespaces (tenants, e.g., **kmcdncom**) and acquired default ServiceAccount tokens for secure, isolated deployments.
- Engineered and applied specialized Role-Based Access Control (RBAC) definitions (**ncom-installation-rbac.yaml**) and cluster-role bindings to grant NCOM installers the necessary permissions.
- Successfully navigated strict cluster security restrictions by creating privileged rolebindings to bypass standard Pod Security Policies (PSP) using custom YAML configurations (**ncom-common-psp.yaml**).
- Enforced secure NCOM deployer access by managing HTTPS SSL/TLS verification, handling custom CA certificates (**CA_CERT**), and avoiding insecure flag settings in production environments.

NCOM Integration & Workflow Management

- Integrated external Continuous Delivery repositories with NCOM using dedicated plugins, configuring external OCI registry endpoints, usernames, and passwords directly into the NCOM dashboard.
- Administered NCOM application workflows, defining precise artifact versions for critical operations including **NSOnBoarding** and **NSUpdate**.
- Configured NCOM deployer credentials programmatically by generating Kubernetes secrets mapping to **USERNAME**, **PASSWORD**, **AUTH_REALM**, and **CLIENT_ID**

NCD Platform & Git Infrastructure Deployment

- Successfully deployed and managed Nokia Continuous Delivery (NCD) and the Nokia Git Server (GitLab and Praefect architecture) across both AWS EKS and NCP/OpenShift platforms using Helm 3.
 - Bound required OpenShift Security Context Constraints (anyuid SCC), linked external CloudNativePG PostgreSQL database clusters and NCD Redis caches, and configured secure credential handling using HashiCorp Vault Static Secrets and Kubernetes secret references.
 - Conducted end-to-end post-deployment Git operations, pipeline verifications, and sanity testing—including initial role assignments, repository onboarding, SSH key management, and CI/CD test pipeline execution—to guarantee complete platform operational readiness.
-

Infosys

11/2021 -11/2025

Thota Ravi Kumar(Senior Systems Engineer)

Enterprise Microservices Deployment & Orchestration

- Configured enterprise-grade Microservice Applications including **APIHub, CoHTTP, FEEM, and FEEMNode** across 10+ environments, ensuring seamless integration with legacy systems and a 99.99% uptime across all managed applications.
- Orchestrated deployments in **15+ production geographies** (India, UK, USA, and others), ensuring **high availability, scalability, and fault tolerance**.
- Engineered a resilient microservices infrastructure utilizing Docker, Podman, and OpenShift, achieving a 99.99% uptime and a 30% increase in application performance for the platform.
- Designed and optimized custom Docker images and **Dockerfiles** to streamline CI/CD pipelines, reducing deployment time and effort.
- Administered **Kubernetes clusters**, provisioning Pods, Deployments, ConfigMaps, and implementing advanced networking with Istio Gateways, VirtualServices, and Istio Service Mesh for secure service communication and traffic management.

API Development

- Composed, developed, and integrated **RESTful APIs** for backend systems such as CoHTTP and CRM, ensuring seamless interoperability by 50%.
- Transformed **Postman** for API testing and Swagger/OpenAPI for documentation to improve developer collaboration and service adoption by 80%
- Enhanced microservice interoperability and service discovery using **API Hubs and Istio Service Mesh**.

Cloud Infrastructure

- Established multi-environment application deployments using **Ansible**, integrating with AWS ECR, and Kubernetes clusters, improving Automation
- Configured simplified deployment pipelines for containerized applications, shrinking release cycles from two weeks to three days and enabling faster iteration based on user testing.

AWARDS & ACHIEVEMENTS

- Infosys “Exceptional Delivery” Award, 2023

EDUCATION

B.Tech(ECE)

V R Siddhartha Engineering College

7.23 CGPA

2017 – 2021 | Vijayawada, India

Intermediate(MPC)

Narayana Junior College

97.5 %

2015 – 2017 | Vijayawada, India
